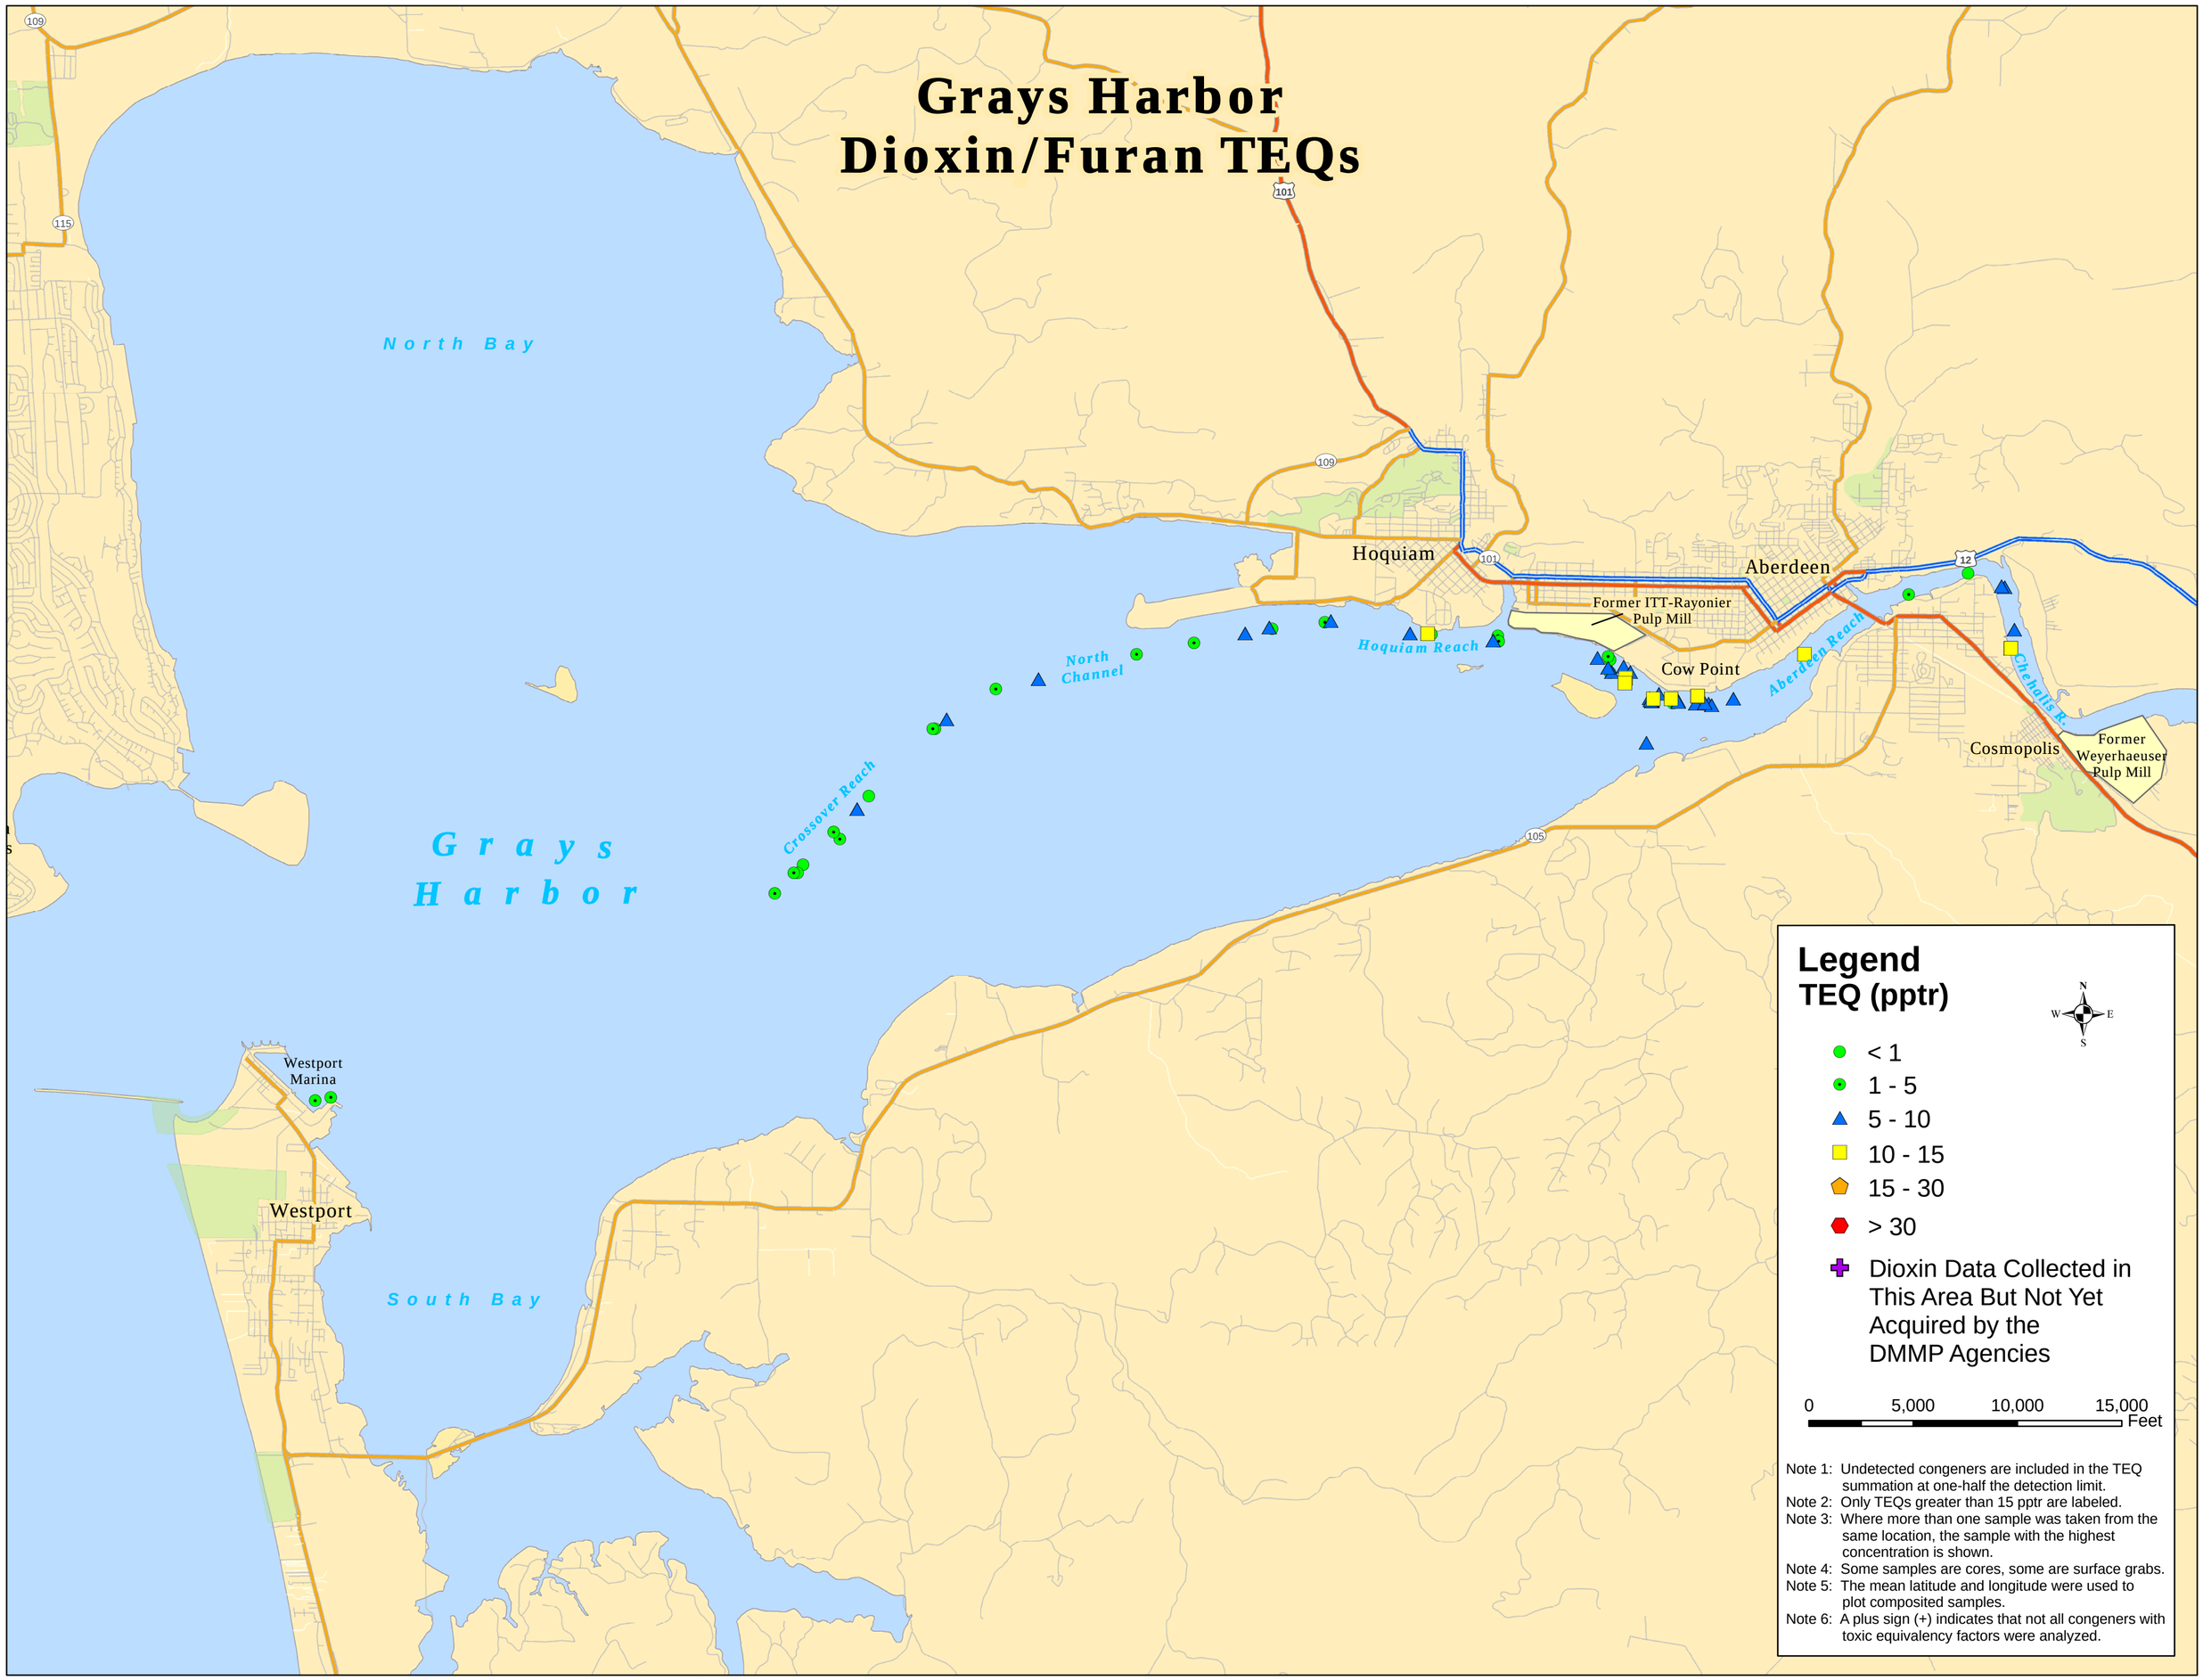
Grays Harbor Dioxin/Furan TEQs



Note 1: Undetected congeners are included in the TEQ summation at one-half the detection limit.
Note 2: Only TEQs greater than 15 pptr are labeled.
Note 3: Where more than one sample was taken from the same location, the sample with the highest concentration is shown.
Note 4: Some samples are cores, some are surface grabs.
Note 5: The mean latitude and longitude were used to plot composited samples.
Note 6: A plus sign (+) indicates that not all congeners with toxic equivalency factors were analyzed.
