APPROVED JURISDICTIONAL DETERMINATION FORM **U.S. Army Corps of Engineers**

SECTION I: BACKGROUND INFORMATION

Α.	REPORT COMPLETION DATE FOR A	APPROVED JURISDICTIONAL	DETERMINATION (J	D):	July 27	7, 2016	í.
----	------------------------------	-------------------------	------------------	-----	---------	---------	----

В.	DISTRICT OFFICE, FILE NAME, AND NUMBER: <u>Seattle District</u> , Seattle City Light, <u>NWS-20150629-WRD</u> . Name of water being evaluated on this JD form: <u>Un-named ditch</u>
C.	PROJECT LOCATION AND BACKGROUND INFORMATION: State: Washington County: SnohomishCity: near Mill Creek Center coordinates of site (lat/long in degree decimal format): Lat: 47.855584 N, Long: -122.179427 W Universal Transverse Mercator: Name of nearest waterbody: Tanbar Creek. Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Lake Washington. Name of watershed or Hydrologic Unit Code (HUC): 17110011. Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request. Check if other sites (e.g., offsite mitigation sites, disposal sites, etc.) are associated with this action and are recorded on a different JD form. List other JDs:
D.	REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY): Office (Desk) Determination. Date: Field Determination. Date(s): 18 May 2016.
	CTION II: SUMMARY OF FINDINGS RHA SECTION 10 DETERMINATION OF JURISDICTION.
revi	re Are no "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the ew area. [Required] Waters subject to the ebb and flow of the tide. Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain:
	CWA SECTION 404 DETERMINATION OF JURISDICTION.
The	re Are "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]
	1. Waters of the U.S. a. Indicate presence of waters of U.S. in review area (check all that apply): ¹ □ TNWs, including territorial seas □ Wetlands adjacent to TNWs □ Relatively permanent waters² (RPWs) that flow directly or indirectly into TNWs □ Non-RPWs that flow directly or indirectly into TNWs □ Wetlands directly abutting RPWs that flow directly or indirectly into TNWs □ Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs □ Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs □ Impoundments of jurisdictional waters □ Isolated (interstate or intrastate) waters, including isolated wetlands
	b. Identify (estimate) size of waters of the U.S. in the review area: Non-wetland waters: 1200 linear feet 2 width (ft) and/or acres. Wetlands: acres.
	c. Limits (boundaries) of jurisdiction based on: Pick List and Pick List Elevation of established OHWM (if known):
	 Non-regulated waters/wetlands (check if applicable):³ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional Explain:

Version 2-8-08 1 of 7

¹ Boxes checked below shall be supported by completing the appropriate sections in Section III below.
² For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
³ Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A.	If t	he aq	ND WETLANDS ADJACENT TO TNWs uatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.		
	1.		W ntify TNW: nmarize rationale supporting determination:		
	2.		tland adjacent to TNW marize rationale supporting conclusion that wetland is "adjacent":		
B.	СН	ARA	CTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):		
	A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.				
	is n sign trib pur	ot an nifica outar pose	nd that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. If the waterbody RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a nt nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the y in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical s, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the y, or its adjacent wetlands, or both.		
	wet	land	O covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite s, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a nt nexus exists is determined in Section III.C below.		
	1.	Cha	aracteristics of non-TNWs that flow directly or indirectly into TNW		
		(i)	General Area Conditions: Watershed size: 278 square miles Drainage area: 278 square miles Average annual rainfall: 34 inches Average annual snowfall: 1-2 inches		
		(ii)	Physical Characteristics: (a) Relationship with TNW: ☐ Tributary flows directly into TNW. ☐ Tributary flows through 3 tributaries before entering TNW. Project waters are Project waters cross or serve as state boundaries. Explain: Identify flow route to TNW ⁵ : Water flows from review area to Tambark Creek, which flows into North Creek, which flows into the Sammamish River, which then flows into Lake Washington, a TNW. Tributary stream order, if known:		
	the	<u>easte</u>	(b) General Tributary Characteristics (check all that apply): Tributary is: ☐ Natural ☐ Artificial (man-made). Explain: The water in question is a man-made ditch constructed around rn perimeter of the sub-station. ☐ Manipulated (man-altered). Explain:		
			Tributary properties with respect to top of bank (estimate):		

Average width: 2.5 feet

⁴ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

⁵ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW. Version 2-8-08

	Average depth: <u>0.5</u> feet Average side slopes: Vertical (1:1 or less).
P	Primary tributary substrate composition (check all that apply): Silts Sands Concrete Cobbles Gravel Muck Bedrock Vegetation. Type/% cover: 10 Other. Explain:
within the substa	Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: The tributary is in good condition, it is tation. Presence of run/riffle/pool complexes. Explain: none. Tributary geometry: Relatively straight Tributary gradient (approximate average slope): 1 %
E	Flow: Tributary provides for: Seasonal flow Estimate average number of flow events in review area/year: 20 (or greater) Describe flow regime: Water flows in and from the ditch during the rainy winter and spring months. Other information on duration and volume:
S	Surface flow is: Confined. Characteristics: Flow stays in ditich.
S	Subsurface flow: Unknown. Explain findings: Dye (or other) test performed:
Π	Tributary has (check all that apply): □ Bed and banks □ OHWM ⁶ (check all indicators that apply): □ clear, natural line impressed on the bank □ changes in the character of soil □ shelving □ vegetation matted down, bent, or absent □ leaf litter disturbed or washed away □ sediment deposition □ water staining □ other (list): □ Discontinuous OHWM. ⁷ Explain: □ .
I:	If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply): High Tide Line indicated by:
Chara E	nical Characteristics: acterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.). Explain: The water color is clear. ify specific pollutants, if known:
∏ R □ V □ L □ □ □ I	gical Characteristics. Channel supports (check all that apply): Riparian corridor. Characteristics (type, average width): Wetland fringe. Characteristics: Habitat for: Federally Listed species. Explain findings: Fish/spawn areas. Explain findings: Other environmentally-sensitive species. Explain findings: Aquatic/wildlife diversity. Explain findings: Tadpoles were present in the ditch.

Version 2-8-08 3 of 7

⁶A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.

⁷Ibid.

Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW (i) Physical Characteristics: (a) General Wetland Characteristics: Properties: __acres Wetland size: Wetland type. Explain: _ Wetland quality. Explain: Project wetlands cross or serve as state boundaries. Explain: . . (b) General Flow Relationship with Non-TNW: Flow is: **Pick List**. Explain: _____. Surface flow is: Pick List Characteristics: _____. Subsurface flow: **Pick List**. Explain findings: _____. Dye (or other) test performed: _____. (c) Wetland Adjacency Determination with Non-TNW: ☐ Directly abutting ☐ Not directly abutting Discrete wetland hydrologic connection. Explain: _____. ☐ Ecological connection. Explain: _ Separated by berm/barrier. Explain: _____. (d) <u>Proximity (Relationship) to TNW</u> Project wetlands are Pick List river miles from TNW. Project waters are **Pick List** aerial (straight) miles from TNW. Flow is from: Pick List. Estimate approximate location of wetland as within the **Pick List** floodplain. (ii) Chemical Characteristics: Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: Identify specific pollutants, if known: (iii) Biological Characteristics. Wetland supports (check all that apply): Riparian buffer. Characteristics (type, average width): _____. Vegetation type/percent cover. Explain: _____. Habitat for: Federally Listed species. Explain findings: _____. Fish/spawn areas. Explain findings: Other environmentally-sensitive species. Explain findings: _____. Aquatic/wildlife diversity. Explain findings: . . Characteristics of all wetlands adjacent to the tributary (if any) All wetland(s) being considered in the cumulative analysis: Pick List Approximately (______) acres in total are being considered in the cumulative analysis. For each wetland, specify the following: Directly abuts? (Y/N) Size (in acres) Directly abuts? (Y/N) Size (in acres) Summarize overall biological, chemical and physical functions being performed: _____. C. SIGNIFICANT NEXUS DETERMINATION

findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: _____.

Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain

Version 2-8-08 4 of 7

	2.	Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:
	3.	Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:
D.		TERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL AT APPLY):
	1.	TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area: TNWs: linear feet width (ft), or acres. Wetlands adjacent to TNWs: acres.
	2.	 RPWs that flow directly or indirectly into TNWs. ☐ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide rationale indicating that tributary flows perennial: ☐ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: The ditch conveys water during the rainy season, normally November-April.
		Provide estimates for jurisdictional waters in the review area (check all that apply): Tributary waters: ~1200 linear feet ~2 width (ft). Other non-wetland waters: acres. Identify type(s) of waters:
	3.	Non-RPWs ⁸ that flow directly or indirectly into TNWs. Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.
		Provide estimates for jurisdictional waters within the review area (check all that apply): Tributary waters: linear feet width (ft). Other non-wetland waters: acres. Identify type(s) of waters:
	4.	Wetlands directly abutting an RPW that flow directly or indirectly into TNWs. Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:
		Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.
	5.	Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs. Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.
	6.	Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs. Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
		Provide estimates for jurisdictional wetlands in the review area: acres.
	7.	Impoundments of jurisdictional waters. ⁹

 $^8 See$ Footnote # 3. 9 To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook. Version 2-8-08 5 of 7

	As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional. Demonstrate that impoundment was created from "waters of the U.S.," or Demonstrate that water meets the criteria for one of the categories presented above (1-6), or Demonstrate that water is isolated with a nexus to commerce (see E below).
Е.	ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY): 10 which are or could be used by interstate or foreign travelers for recreational or other purposes. from which fish or shellfish are or could be taken and sold in interstate or foreign commerce. which are or could be used for industrial purposes by industries in interstate commerce. Interstate isolated waters. Explain: Other factors. Explain:
	Identify water body and summarize rationale supporting determination: Provide estimates for jurisdictional waters in the review area (check all that apply): Tributary waters: linear feet width (ft) Other non-wetland waters: acres Identify type(s) of waters: Wetlands: acres.
F.	NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY): If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements. Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce. Prior to the Jan 2001 Supreme Court decision in "SWANCC," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR). Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: Other: (explain, if not covered above):
	Provide acreage estimates for non-jurisdictional waters in the review area, where the <u>sole</u> potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply): Non-wetland waters (i.e., rivers, streams): linear feet width (ft). Lakes/ponds: acres. Other non-wetland waters: acres. List type of aquatic resource: Wetlands: acres.
	Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply): Non-wetland waters (i.e., rivers, streams): linear feet width (ft). Lakes/ponds: acres. Other non-wetland waters: acres. List type of aquatic resource: Wetlands: acres.
SE	CTION IV: DATA SOURCES.
A.	SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below): Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Data sheets prepared/submitted by or on behalf of the applicant/consultant. Office concurs with data sheets/delineation report. Office does not concur with data sheets/delineation report. Data sheets prepared by the Corps: 18 May 2016. Corps navigable waters' study: The waterbody is on the Section 10 Navigable Waterway List for Seattle District. U.S. Geological Survey Hydrologic Atlas: USGS NHD data. USGS 8 and 12 digit HUC maps.

Version 2-8-08 6 of 7

 $^{^{10}}$ Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

B. ADDITIONAL COMMENTS TO SUPPORT JD: The North-South Ditch runs along the Bothell Substation fence-line, separated from a slope wetland outside of the fence by poured concrete aggregate. Several small culverts allow water to flow through the concrete aggregate into the ditch on the east side of the ditch. Other small culverts drain water from the Substation into the west side of the ditch. Water flows south through the ditch and exits the ditch via a culvert at the southeast corner of the Substation. The culvert discharges into a wetland swale, which connects to a larger wetland complex abutting Tanbar Creek. The East-West Ditch runs along the Bothell Substation fence-line, parallel to 156th Street Southeast. It is connected to the North-South Ditch at the northeast corner of the Substation. Several small culverts drain water from the Substation into the East-West Ditch to drain the Substation. Water flows west through the East-West ditch and exits through a culvert just west of the Substation office. The culvert outlets to 156th Street Southeast.

Both ditches are lined with quarry spalls. Vegetation has grown because of lack of maintenance, primarily cattails, lady fern, horsetail, and mosses. Sediment has begun to build up in the ditch. Iron desposits on rocks and iron deposits in the water are present.

Water was present in the ditch. The applicant indicated that water flowed in any given year for at least 6 months between November to April While this man-made ditch may have been originally dug in uplands, because it conveys a relatively permanent flow of water to a TNW, it is a water of the U.S.

.

Version 2-8-08 7 of 7

NWS-2015-629 May 18, 2016 Sheet 1 of 2

** At the 18 May 2016 site visit the culvert was confirmed and that water is conveyed from forested wetland into the PEM areas, thus the connection.
