

## Announcements

### **Libby Dam Project Environmental Policy** **13 December 2005** **Revision 1**

Libby Dam Project is a multi-purpose water resource development. Its purposes are flood reduction, hydropower, recreation, and environmental stewardship. We recognize that our day to day activities in operating a facility such as Libby Dam have a direct impact on the environment. Our goal is to operate Libby Dam to minimize negative impacts on the environment through pollution prevention and mitigation, and we are committed to continual improvement. Our commitment is to comply with environmental legislation, rules, and regulations. We encourage environmental stewardship at every level throughout the organization, through the following seven environmental operating principles:

- Strive to achieve environmental sustainability
- Consider environmental consequences
- Seek balance and synergy
- Accept responsibility
- Mitigate impacts
- Understand the environment
- Respect others views

Libby Dam will establish and maintain an environmental management system that develops, monitors, and measures environmental objectives and targets to strive for optimum environmental performance.

This policy will be communicated to all employees and will be available to the public.

As the project manager at Libby Dam, I affirm my commitment to this policy. It will be reviewed annually to ensure it remains viable and current.

Michael P. Shea  
Project Manager
