

Purpose

The Skokomish River Basin Ecosystem Restoration and Flood Damage Reduction General Investigation will address ecosystem restoration and flooding in the watershed. Mason County, Skokomish Indian Tribe, U.S. Army Corps of Engineers, along with other several state, federal, and local governmental entities have been working to develop a plan for restoring the ecosystem in the Skokomish River watershed.

All of the agencies are working hand-in-hand to develop the best plan of action for the people of Mason County and Skokomish Tribe. There is an increased commitment by the Skokomish Tribe and Mason County, as well as other entities, that will enable progress towards a solution to restoration of the Skokomish River.

Currently, the project partners are studying the feasibility of certain actions that will meet the initial goals of the investigation.

The initial goals are: 1) creating a sustainable and restored river channel, 2) agricultural sustainability in the valley for economic development, 3) restoration of habitat to aid recovery of endangered salmon species, and 4) flood damage reduction in the valley.

To learn more about the project, please read this [fact sheet](#). To learn more about the execution of the project, the team members, the total project cost and cost share distribution, and the scheduled reviews, please read the [PMP](#) and the [Peer Review Plan](#).

Stay tuned to this Website for future updates on the Skokomish River Study.
