

TUKWILA, WA

PROJECT DESCRIPTION: The project consists of modifications and improvements to an existing levee system, to portions of Christensen Road (in the City of Tukwila), and to portions of Frager Road (in King County). The project also includes erosion control (such as slope protection in the form of gabion walls or vegetative ground covers), provision for interior drainage (which predates the project), and landscape restoration. The existing levee sections were not substantially modified by this project. However, all portions of the project, including the existing levee sections, comprise the flood protection provided by this project and therefore are included in the operation and maintenance responsibilities of the local sponsor. Project Completion: 1992
