Interim Implementation of VARQ Flood Control at Libby and Hungry Horse Dams

On January 5, 2007, the Corps of Engineers Northwestern Division Commander, Brigadier General Gregg Martin, signed a Determination and Finding for Libby Dam operation in 2007. It constitutes a decision that Libby will be operated in strict accordance with the VARQ Operating Procedures as provided in the 2002 EA, while the Corps will continue to evaluate and analyze factors associated with a long-term (2008 and beyond) operational decision.

In addition, the following documents (pdf format) are directly related to 2002 interim implementation of alternative flood control and fish operations at both Libby and Hungry Horse dams. Hungry Horse operation under VARQ remains in effect under Reclamation's 2002 documentation for that project.

Final Corps Environmental Assessment (EA) for interim implementation of VARQ and fish operations at Libby and Hungry Horse dams (December 2002): Main document plus Appendices A (fish flow details), B (authors & contributors) and G (Finding of No Significant Impact or FONSI). (1.5 MB)

- Final Corps EA Appendix C: Comments and Responses (5.3 MB)
- Final Corps EA Appendix D: Kootenai Local Hydro-Regulation Modeling Report (2.9 MB)
- Final Corps EA Appendix E: System Flood Control Report (714 KB)
- Final Corps EA Appendix F: Multi-purpose System Operation Hydrology Report (336 KB)
- Bureau of Reclamation Environmental Assessment for Interim Implementation of VARQ at Hungry Horse Dam - March 2002 (1 MB)
- Letter to USFWS and NMFS concerning process to decide on interim implementation of VARQ - February 8, 2002 (131 KB)
