

CENWS-OD-TS-DMMO

MEMORANDUM FOR: RECORD

October 3, 2008

SUBJECT: DETERMINATION ON THE SUITABILITY OF PROPOSED MAINTENANCE DREDGED MATERIAL FROM PORT OF TACOMA WASHINGTON UNITED TERMINAL PROJECT HIGH SPOT MAINTENANCE DREDGING, (NWS-2008- 01128-WRD) IN COMMENCEMENT BAY, WASHINGTON EVALUATED UNDER SECTION 404 OF THE CLEAN WATER ACT FOR OPEN-WATER DISPOSAL AT A DMMP NON- DISPERSIVE OPEN-WATER DISPOSAL SITE.

1. The following summary reflects the consensus determination of the Dredged Material Management Program (DMMP) agencies (U.S. Army Corps of Engineers, Washington Departments of Ecology and Natural Resources, and the Environmental Protection Agency) on the suitability of an estimated 5,600 cy of maintenance dredging material from the wharf high spot area within the Port of Tacoma Washington United Terminal Project, for open-water unconfined disposal at the Commencement Bay non-dispersive open-water disposal site in Tacoma, Washington. This portion of the project is part of a larger characterization of an estimated 234,000 cy (see Table 2)

Table 1. Project Details

SAP received	May 30, 2008
SAP approved	June 25, 2008
Sampling dates (High Spot Area only) (vibracorer)	July 29, 2008
Final data report for High Spot Subarea submitted	September 29, 2008
Recency Determination: Low-Moderate Concern (6 years)	July 2014
DAIS reference number	WUTHS--1-A-F-259

Table 2. Washington United Terminal Project dredging characterization SAP Breakdown.

Dredging Subarea	DMMU ID (characterized depth)	Core Station ID (WUT)	Volume (cy)
Wharf High Spot area	WUT-5 (-44.6 – 54 ft MLLW)	05-01, 05-02	5,600 (this SDM)
Wharf subarea	WUT-4 (-47.5 – 54 ft MLLW)	04-01, 04-02, 04-03, 04-04	28,400
Cutback area	WUT-01 (+20 - +16 ft MLLW) WUT-02 (+16 - +8 ft MLLW) WUT-03 (+8 - 0 ft MLLW)	BH1, BH2, BH3 BH1, BH2, BH3 BH1, BH2, BH3	12,300 24,700 24,700 61,700 (characterized footprint) 138,300 (uncharacterized / native material)
Total Project :	5 DMMUs	9 Core Stations	95,700 cy (characterized Volume) 234,000 cy (Total Project Volume)

2. **Background.** As noted in Table 2 above, the results described in this suitability determination are restricted to the "high spot" area. This area is highlighted by the Port of Tacoma for dredging as soon as possible, because it poses a risk of grounding for ships during very low tide conditions. The DMMP agencies will review the sediment quality data for the remaining areas in the Wharf subarea and Cutback area, outside the Wharf "high spot" area in a separate suitability determination due to the urgency of the "high spot" area for early dredging.
3. **SAP review and Sampling.** The draft SAP was submitted to DMMP agencies for review on May 30, 2008 and approved on June 25, 2008. The sampling was initiated and completed on July 29, 2008, and vibracorer

samples were collected at two stations within the "high spot" Dredged Material Management Unit-5 (DMMU-5)(see **Figure 1**: Vicinity Map; **Figure 2**: Proposed dredging and cutback areas; **Figure 3**: Actual & Proposed Sampling Locations for High Spot Dredging subarea). The testing also included evaluation of dioxins/furans, as well as the PSDDA/DMMP Chemical of Concern list. . The approved sampling and analysis plan was generally followed. The sampling and analysis characterization report was submitted to the DMMP agencies for review on September 29, 2008, and the DMMP agencies concluded that the quality assurance/quality control guidelines specified by the DMMP were generally complied with, and these data were deemed suitable for decision-making using best-professional-judgment.

4. **Chemical Analysis and Comparison with DMMP Marine Guidelines.** The Agencies' approved sampling and analysis plan was followed and quality assurance/quality control guidelines specified by PSEP and DMMP were generally complied with. A summary of chemical analysis results for all COC except dioxins/furans is provided in **Table 2**, and demonstrates that for the single DMMU analyzed, there were no detected or undetected chemicals exceeding either **DMMP-Marine** or **SMS-Marine** guidelines. **Table 3** provides the results of dioxin/furan testing results for the High Spot DMMU, and demonstrate relatively low dioxin/furan concentrations in the lower ranges of those observed during previous testing, with a total PCDD/F TEQ concentration of **0.633 pptr** ($U = \frac{1}{2}$) and **0.296** ($U = 0$). Based on these chemical testing results, no toxicity testing is required. Furthermore, based on these testing results, there is no reason-to-believe that would trigger the requirement to resample and analyze the exposed surface after maintenance dredging of the high spot area has been completed.
5. **Suitability for Unconfined-Open Water Disposal.** Therefore, based on these testing results, all 5,600 cubic yards of maintenance dredged material is suitable for unconfined-open-water disposal at the Commencement Bay disposal site based on best-professional-judgment.
6. This memorandum affirms the suitability of the sediment proposed for dredging at the Port of Tacoma Washington United Terminal "High Spot" Wharf dredging Project maintenance dredging area for unconfined-open-water disposal at an appropriate DMMP non-dispersive disposal site in Commencement Bay. However, this suitability determination does not constitute final agency approval of the project. A dredging plan for this project must be completed as part of the final project approval process. A final decision will be made after full consideration of agency input, and after an alternatives analysis is done under Section 404(b)(1) of the Clean Water Act.

SUBJECT: DETERMINATION ON THE SUITABILITY OF PROPOSED MAINTENANCE DREDGED MATERIAL FROM PORT OF TACOMA WASHINGTON UNITED TERMINAL PROJECT HIGH SPOT MAINTENANCE DREDGING, (NWS-2008-01128-WRD) IN COMMENCEMENT BAY, WASHINGTON EVALUATED UNDER SECTION 404 OF THE CLEAN WATER ACT FOR OPEN-WATER DISPOSAL AT A DMMP NON- DISPERSIVE OPEN-WATER DISPOSAL SITE.

Notes:

Bold = Detected result

J = Estimated value

U = Compound analyzed, but not detected above detection limit

UJ = Compound analyzed, but not detected above estimated detection limit

⁽¹⁾ Insufficient porewater was available in the sample to test for tributyltin; therefore, tributyltin was analyzed in bulk sediment.

⁽²⁾ 2-Methylnaphthalene is not included in the sum of LPAHs

⁽³⁾ Benzo(j)fluoranthene is included in the total of benzo(b&k)fluoranthenes

⁽⁴⁾ Total xylene is the sum of o-, m-, p- isomers

⁽⁵⁾ Total DDT consists of the sum of 4,4'-DDD, 4,4'-DDE, and 4,4'-DDT

⁽⁶⁾ Total Chlordane includes alpha-chlordane (cis-chlordane), beta-chlordane (trans-chlordane, gamma-chlordane), cis-nonaclor, trans-nonaclor and oxychlordane.

Data measured in dry weight basis

-- = results not reported or not applicable

Totals are calculated as the sum of all detected results. If all are undetected results, the highest reporting limit value is reported as the sum.
