Registration is required prior to award of any contract, basic agreement, basic ordering agreement, or blanket purchase agreement from a solicitation issued after May 31, 1998. LACK OF REGISTRATION IN THE CCR DATABASE WILL MAKE AN OFFER INELIGIBLE FOR AWARD.

SCOPE OF WORK**Drilling****Project: KC-767 Bed-down, Fairchild AFB, Washington****LINE ITEM 1.**

Project: KC-767 Add/Alter Hydrant Refueling System, Construct Maintenance Hangars, Construct General Maintenance Hangar, Fairchild Air Force Base, Washington

Project Description

Drilling described in this scope of work supports proposed hydrant refueling system and aircraft hangar construction at Fairchild Air Force Base, near Spokane, Washington. The drilling work shall be accomplished on a level, concrete paved aircraft parking apron, and an unpaved level field. The Air Force will move aircraft away from the project site prior to conducting the drilling work. Since this work will be accomplished in a high-security area, all personnel will obtain flightline badges, and vehicle passes as required. Also, all work will be performed while accompanied by US Air Force escort personnel.

Purpose of Drilling Investigation

The purpose of this investigation is to: perform geotechnical soil classification; and confirm the presence, or lack of, pre-existing jet-fuel related hydrocarbon contamination in soils underlying the proposed hydrant refueling system. Soils designated for laboratory analysis will be collected by hollow-stem auger split spoon sampler. If hydrocarbon contamination is present, USACE shall determine if it exceeds Washington State MTCA Level A. If MTCA A levels are exceeded, USACE shall determine any special soil excavating and handling procedures and conditions that will be required during construction of the hydrant refueling system.

Drilling Scope of Work

Drilling work will be performed at 10 locations under this line item. Work shall consist of hollow-stem auger drilling through cored pavement for geotechnical classification and environmental sample collection at seven (7) separate locations, and hollow-stem power auger drilling on an unpaved location for geotechnical classification and environmental sample collection at three (3) separate borehole locations on Fairchild Air Force Base, near Spokane, Washington. The 12-inch diameter Portland Cement Concrete (PCC) aircraft parking apron pavement cores (approximately 16 inches thick) shall be cut by others. Immediately following concrete coring at the seven locations, a truck mounted hollow-stem power auger shall be used for drilling the borings to a maximum depth of approximately 15 feet below ground surface through each cored parking apron location. Hollow-stem power auger drilling at the three unpaved locations shall consist of borings to a maximum depth of 25 feet. Additional drilling contractor requirements are as follows:

1. The truck-mounted hollow-stem power auger with an inside diameter of 4.25 inches shall be set up over each pre-concrete cored, or unpaved borehole location. Standard penetration tests (ASTM D 1586) will be taken at selected intervals during drilling in each borehole as directed by on-site USACE personnel. Once the auger reaches the desired sampling depth, Soil samples for geotechnical evaluation and environmental analysis shall be collected in a stainless steel split-spoon sampler at the direction of USACE personnel. Soil samples shall be collected using 1.5 foot long, 2.0-inch OD, or 2.0 foot long, 3.0-inch OD stainless steel split-spoon samplers driven with a 140-pound hammer. After each split spoon sample is retrieved, the contractor shall provide and open the core barrel to an on-site USACE representative. The USACE representative shall be responsible for visual classification, field screening, and sample collection.
2. Drilling shall stop at approximately 15 feet below ground surface at each of the seven cored pavement boreholes, and at approximately 25 feet below ground surface at each of the three unpaved boring locations. Upon reaching

refusal, or bottom of borehole, each sampled hole will be backfilled with granular bentonite chips as directed by USACE personnel. Perched groundwater may be encountered before reaching the bottom depth in each borehole. In that instance, the soils will be logged, but no environmental samples shall be collected below perched groundwater.

3. All potentially contaminated IDW soils (as directed by USACE personnel) will be placed in contractor-furnished DOT approved 55-gallon steel drums with removable lids. The drums will be temporarily stored on base in a secured fenced area at the direction of USACE personnel.

4. The contractor shall decontaminate the split-spoon sampler, drive shoe, and catcher prior to commencing the field work, and after collection of each sample. The contractor shall decontaminate the auger flights prior to commencing fieldwork, and between each exploration borehole. Decontamination shall be accomplished by using a portable steam cleaner. Decontamination water shall be contained in a DOT approved 55-gallon bung-type drum, and then transferred to a temporary storage site at the direction of USACE personnel.

5. Contractor's cost estimate shall be based on a crew of 2 to 3 persons. Equipment operation and sampling costs shall be based on a daily rate for a total of 3 days. Mobilizing and demobilizing to and from work site shall be by job or lump sum.

6. Prior to the sampling, a USAF digging permit will be initiated by the Government (USACE) through the base civil engineers. Underground utilities will be located and marked by the US Air Force, and/or civilian utilities locators. Utilities Underground Location Center, telephone 1-800-424-555, will be contacted. The various utilities will locate and mark the underground utilities at the proposed drilling sites according to Seattle District USACE instructions. Proposed locations in close proximity to underground utilities shall be moved to clear areas by USACE.

7. Drilling fieldwork is scheduled to commence on or about **August 25, 2003**. Work will be performed during daylight hours only.

8. All exploration boreholes shall be patched by replacing and tamping down each concrete core, and finishing each borehole flush to the pavement surface with quick setting concrete.

9. Due to US Air Force mission requirements, the contractor may be required to temporarily move the drilling equipment off the project site with minimal advance notice. The contractor will be considered in standby status if directed to temporarily move off-site.

10. Technical Point of contact for Line Item 1 is Joseph Marsh, U.S. Army Corps of Engineers, Seattle District, 4735 East Marginal Way South, 98134, (206) 764-6170. Mr. Marsh will coordinate time and meeting place with drilling contractor, and provide drilling location maps and other information.

SCOPE:

TRUCK-MOUNTED HOLLOW STEM POWER AUGER: Work under this line item shall consist of drilling nineteen (19) hollow-stem power auger holes to a depths ranging from 10 feet to 40 feet (assumed depth to rock) at the site of the proposed hangars and security lighting. Estimated drilling shall be six (6)-40 foot holes to top of rock; three (3)-25 foot holes; and six (6)-10 foot holes at the proposed hangars and four (4) 30 foot holes for new security lighting poles/towers.  =====

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29 CFR 5.5(a)(1)(ii)).

 In the listing above, the "SU" designation means that rates listed under that identifier do not reflect collectively bargained wage and fringe benefit rates. Other designations indicate unions whose rates have been determined to be prevailing.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- * an existing published wage determination
- * a survey underlying a wage determination
- * a Wage and Hour Division letter setting forth a position on a wage determination matter
- * a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch

of Construction Wage Determinations. Write to:
Branch of Construction Wage Determinations
Wage and Hour Division
U. S. Department of Labor
200 Constitution Avenue, N. W.
Washington, D. C. 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N. W.
Washington, D. C. 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U. S. Department of Labor
200 Constitution Avenue, N. W.
Washington, D. C. 20210

4.) All decisions by the Administrative Review Board are final.
