

**APPROVED WORK WINDOWS FOR FISH PROTECTION  
IN WATERS WITHIN NATIONAL PARK BOUNDARIES,  
COLUMBIA RIVER, SNAKE RIVER, AND LAKES  
BY WATERCOURSE**

(1) The general work window is given by watercourse: Columbia River, Snake River, Lakes or waters within National Park Boundaries.

(2) The work window for a listed watercourse applies to the mainstem. For approved work windows for tributaries or other freshwater areas, refer to Table D-1.

(3) Where a tributary is listed as a boundary, that boundary shall be the line perpendicular to the receiving stream and which is projected from the most upstream point of the tributary mouth to the opposite bank of the receiving stream. (See Figure 1)

Figure 1. Stream boundary line

(4) Work within two hundred (200) feet landward of the State's ordinary high water line in waters of the U.S. listed as "submit application" or "closed" is not authorized by the Washington Department of Fish and Wildlife (WDFW). Site review and a specific written authorization (and State HPA) are required for these state waters.

(5) Lakes do not include impoundments of the Columbia or Snake Rivers.

(6) These “approved work windows” are based on best available information as of the date of the Services’ concurrence with this informal consultation. They may be amended or deleted in the future as new information is obtained. The Corps will use the most current version of these windows when the authorizing projects for which conformance with the ESA is in part based on the windows in this programmatic consultation.
