

Specific Project Information Form for Shellfish Activities in Washington State Inland Marine Waters.

Appendix A: An online method for determining the Latitude/Longitude of your project:

1. Go to <https://fortress.wa.gov/ecy/coastalatlas/tools/Map.aspx>
2. Use the +/- tool to find your project location and bring it into the viewing pane.
3. Select tools to get a drop down selection.
5. Select the "i" Identify symbol.
6. Click your cursor on a corner point of your project area. The latitude and longitude of that point will show as a decimal number. Note the latitude and longitude for each of the four corners of your project area.
7. Then, label the corners directly on your map.
8. Usually four corners are adequate. However, if you have multiple areas that are not contiguous within your project area, label the latitude and longitude for each area.
