D. ADDITIONAL COMMENTS TO SUPPORT AJD: This location in Walla Walla County is one of the driest areas of the state receiving approximately 10 to 15 inches of rain annually. With prior permission from the property owner and agent, the project site was visited by the Corps Project Manager on October 16, 2018. Weather was clear with temperatures in the low 60s. The site was observed from Touchet Road North near the silos shown in the maps and aerial photos. Vegetation consisted mostly of planted wheat with invasive weeds such as cheat grass (*Bromus tectorum*) along the field edges. There were no primary or secondary hydrologic indicators and no topographic features to suggest the presence of surface water. Based on the combination of the findings from the wetland delineation report, field visit observations, and data gathered in the office, there are no wetlands or other Waters of the U.S. on the project site. .
